Blyth Valley Business Park

Following our excellent staff seminar in June, business has continued to improve and we have received delivery of our new fleet of vans. I'd encourage you to keep a lookout for these on your own travels!

It was good to hear news from the Government this week that there is going to be additional funding for the schools building programme. In addition to the £500 million which has been pledged to local authorities to provide new school places, a further £2 billion PFI programme has been announced. This should equate to 100 to 300 new schools across the UK.

Confidence in the London commercial office sector continues to rise as many clients are now looking to move to new or refurbished office space whilst rates are still relatively competitive. DTZ state that clients in the city, now looking for grade A space, are prepared to negotiate pre-letting agreements off plan.

With further details provided by the Government on what public spending they are planning, the renewed interest in office space in the city and school spending, we are confident that we will be securing some of this additional work in the months to come.

Whilst we do work across the UK, we are particularly keen to win work locally and have over the last few years completed some spectacular projects in and around St Helens. We have several projects that are in the pipeline at the moments and I look forward to sharing these with you in the future newsletters.

Mark Revell - Sales Director

New Vans

‘Expansion at LouvreSol’

Expansion is key for St Helens solar shading and ventilation company LouvreSol as the market still shows little signs of recovery. The company has just invested in three new vans to service its growing business across the UK.

Eddie Dean commented at the company’s recent training seminar, “Whilst activity in the construction sector has reduced significantly in the last couple of years, there is still a great deal of business to be converted

in the market for a growing business like ourselves. The renewed interest in solar shading and natural ventilation, coupled with the real energy savings that can be realised with these systems, puts us as one of the ‘must have’ installations for any building, new or existing.”

As the company is also very active in the area of research and development, future growth is also expected from a recently designed, thermally efficient adjustable ventilation louvre system.

Once the systems louvre blades are fully closed, the unit offers both a low air permeability and a degree of thermal insulation as each aluminium louvre blade is thermally broken. The system is currently being installed in a trial application and will be commercially available shortly.

Further information about LouvreSol SP, their products and services, can be found at www.louversol.com or by phoning their Head Office in St Helens on 01744 811866.
